- 1. A composition of matter for use in the formation of alkaline earth-containing materials, comprising:
- a compound comprising an alkaline earth metal beta-diketonate (and the isolectronic derivatives thereof) and an amine, said compound being a liquid at 60 °C and capable of being vaporized.
- 2. A composition of matter for use in the formation of alkaline earth-containing materials, comprising:
- a compound comprising an alkaline earth metal beta-diketonate (and the isolectronic derivatives thereof) and an amine, said compound being a liquid at 20 °C and capable of being vaporized.
- 3. The composition of matter as in claim 1, wherein the beta-diketonate has the formula, ${}^{1}RC(=O)CHR^{3}C(=O)R^{2}$, where ${}^{1}R$ and R^{2} are independently selected and are an alkyl group, a fluoroalkyl group, an alkyl group substituted by other elements, or an aryl group; and R^{3} may be hydrogen, an alkyl group, a fluoroalkyl group, or an alkyl group substituted by other elements.
- 4. The composition of claim 3, wherein the groups ¹R and R² contain four or five carbons.
- 5. The composition of claim 3, wherein the group R³ contains less than two carbons.
- 6. The composition of claims 4 or 5, wherein the beta-diketonate ligand is chosen from those listed in Table 1 of the specification.
- 7. The composition of matter as in claim 1 or 2, wherein the amine has the formula, $R^aN(R^b)CH_2CH_2\{N(R^c)CH_2CH_2\}_nN(R^d)R^c$, wherein R^a , R^b , R^c , R^d , and R^c are

independently selected and are hydrogen or an alkyl group, a fluoroalkyl group, an alkyl group containing oxygen- or nitrogen-containing species or an aryl group, and n is a non-negative integer.

- 8. The composition of matter as in claim 7, wherein n has the value 0, 1 or 2.
- 9. The composition of matter as in claim 7, wherein n has the value 1.
- 10. The composition of matter as in claim 7, wherein at least one of the groups R^a , R^b , R^c , R^d , and R^e contains more than one carbon atom.
- 11. The composition of matter as in claim 7, wherein the amine is selected from Table 2 of the specification.
- 12. The composition of matter as in claim 1, wherein the amine complex of a barium beta-diketonate is chosen from Table 4 of the specification.
- 13. The composition of matter as in claim 2, wherein the compound is chosen from Tables 3, 5, 6, 7 or 8 of the specification.
- 14. The composition of matter as in claim 1, wherein the compound has a solubility greater than 1 molar in a liquid solvent.
- 15. The composition of matter as in <u>claim</u> 1, wherein the compound has a solubility greater than 0.5 molar in a liquid solvent.
- 16. A process for forming a material containing an alkaline-earth metal, comprising:

5

providing a liquid comprising a compound including an alkaline earth metal betadiketonate (and the isolectronic derivatives thereof) and an amine, and

contacting the liquid or its vapor with a heated surface in a deposition process to deposit a material containing an alkaline-earth metal.

- 17. The process of claim 16 in which the deposited material comprises one or more metal oxides.
- 18. The process of claim 16 in which the metal or metals are selected from the group consisting of barium, strontium and titanium.
- 19. The process of claim 16 in which the metal or metals are selected from the group consisting of strontium, bismuth, niobium and tantalum.
- 20. The process of claim 16, wherein a sol-gel process is used to deposit material containing one or more metals or metal oxides.
- 21. The process of claim 16, wherein a spray-coating or spin-coating process is used to deposit material containing one or more metals or metal oxides.
